	<input type="checkbox"/>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

<sup>1</sup> Calculate the percentage of organic ingredients by dividing the total net weight or volume of combined organic ingredients by the total weight or volume of all ingredients, excluding water and salt.

<sup>2</sup> For products labeled as "100% organic" and "organic", handlers must not use organic and non-organic forms of the same ingredients. Such use is not prohibited for products labeled as "made with..." or products containing <70% organic ingredients.

<sup>3</sup> Products labeled "100% organic" or "organic" and all ingredients identified as "organic" in an ingredient statement must not be produced using: excluded methods; sewage sludge; ionizing radiation; a processing aid not on the National List; or sulfites, nitrates or nitrites added during the production or handling process (except that wine containing added sulfites may be labeled "made with organic grapes").

<sup>4</sup> Excluded methods include cell fusion, microencapsulation, macroencapsulation and recombinant DNA technology (gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology).

<sup>5</sup> For products labeled as "100% organic" and "organic", handlers are required to source organic ingredients when commercially available. Commercial availability is determined by three factors: appropriate form, quality, or quantity. This is not required for products labeled as "made with..." or products containing <70% organic ingredients. Documentation must be available for inspection.
